IN LINE SINGLE-ACTING CONTROL VALVES

Their function is to control and, if necessary, to shut-off the flow in one direction, allowing a free return flow in the opposite direction. Appreciated for their aesthetic characteristics, they are a reliable solution.

The suitable dimensioning has made possible to obtain, in a little space, a great mechanic resistance of the components. The spring in high-resistance material is housed in such a way that it does not close as a pack during the opening of the single-acting conical valve poppet.

Like all the valves of the series FT 257 they ensure:

- metallic seal;
- flow linearity at the opening;
- accurate control for a wide range of flow rate, thanks to the double reference system
- wide range of the flow rate control;
- impossibility for the needle to leave its seat even in the max. opening position;
- stable positioning thanks to a dowel inside the knob;
- quickness in the assembling of the panel (the ring nuts (G) are supplied on request).

The check valve is calibrated at 0,5 bar.

On request

- Versions AISI 316 code FT 2257/5
- Viton seals (V)
- NPT threads
- Equipped with ring nuts (G)
- Knob in ABS (mp)
- Lobes aluminium die-cast handwheel (RA)
