

Technical Data Sheet

Food-Tek Airline Lube

A food grade, synthetic, non toxic, airline and pneumatic lubricant for food, beverage, pharmaceutical and other clean industries

Airline Lube is a premium quality, fully synthetic, food grade, non-toxic lubricant developed for pneumatic airlines and systems used in food, drink and pharmaceutical processing and packaging equipment. Also suitable for other compressed air systems where a clean, non-staining, non tainting fluid is required.

Applications: -

Industrial: Pneumatic systems, airlines, circulating oil systems

Features and Benefits: -

- | | |
|-------------------------------------|---|
| ➤ NSF H1 registered | Safe to use where incidental food contact may occur. |
| ➤ Synthetic base fluid | Long life, extended drain intervals |
| ➤ Low Coefficient of friction | Reduces wear, increases lubricity |
| ➤ Clean, non tainting, or staining | Does not affect the end product, increases productivity |
| ➤ Oxidation and Corrosion inhibited | Reduces sludge and residue |
| ➤ Low Foaming | Reduces risk of cavitation and pump damage |

Method of Application: -

Airline Lube is suitable for pneumatic airline systems designed to operate in the most rigorous applications. Follow manufacturer's instructions.

Where application is made manually, **Airline Lube** needs to be applied daily and reapplied just before equipment is shut down.

Part Numbers: 50190
